

APPENDIX II

Thorn Creek Facility

Location: Seven (7) miles from McCall, Idaho; six (6) miles are paved highway and one (1) mile is gravel highway.

This facility has on it at the present time two (2) CCC type buildings 24' x 40' and one (1) shower house 24' x 40' in which are located six (6) toilets, ten (10) head industrial shower units and twenty (20) mixing faucets. All of the materials for this installation are located here but installations have not been accomplished.

For winter usage the buildings will require insulation. There is sufficient area for the erection of further prefabricated buildings.

Septic tank facility is adequate for up to 200 people and an auxiliary tank can be installed. A spring with pipe lines from a 4700 gallon tank to buildings is present and an additional unattached 4700 gallon tank is also located on the installation.

In order to tie in to the Idaho Power Company lines, a distance of 1½ miles of line would have to be put in. For communication purposes, a distance of 2 miles of line would have to be run. There is a Forest line and telephone into the installation.

The access road from the main highway, a distance of one mile, will require some graveling and grading. During the winter time the main highway is kept open and it would be necessary to plow out only one mile of road.

This area can be restricted to military use only and the Forest Supervisor has indicated that any areas on Forest land desirable for special restricted work can be allocated upon request.

The Forest Supervisor has indicated that if the 1300th Air Base Wing is desirous of utilizing the Thorn Creek facility on a year-round basis it can be made available. This installation should be thoroughly surveyed by the AIO.
